KATA PENGANTAR

Penerbitan Penyiasatan Pengeluaran Padi (PPP), Musim Utama 2020/2021 kali ke 82 ini merupakan salah sebuah terbitan bersiri Jabatan Pertanian yang membekalkan maklumat padi yang lengkap. Maklumat yang disertakan merujuk kepada PPP untuk tempoh tanaman padi antara 1 Ogos 2020 hingga 28 Februari 2021 yang merangkumi Penyiasatan Hasil dan Penyiasatan Keluasan Aktiviti Tanaman Padi.

Laporan ini membekalkan maklumat tentang skop dan metodologi penyiasatan serta keputusan PPP untuk Padi Sawah dan Padi Huma di peringkat negeri dan nasional. Disamping itu, maklumat amalan kultura dan keputusan ujian pengeringan juga dipersembahkan.

Saya berharap penerbitan ini dapat memenuhi keperluan perancang, pembuat dasar, penyelidik dan juga pihak awam.

Saya ingin merakamkan penghargaan terima kasih kepada Urusetia PPP, Bahagian Perancangan, Teknologi Maklumat & Komunikasi, Bahagian Padi, Tanaman Industri dan Florikultur, Bahagian Pengurusan dan Pemuliharaan Sumber Tanah, Bahagian Biosekuriti Tumbuhan, Bahagian Pengembangan Pertanian dan Industri Asas Tani, Bahagian Kejuruteraan Pertanian, Bahagian Kawalan Kualiti Tanaman dari Jabatan Pertanian, semua Jabatan Pertanian Negeri, semua Jabatan Pengairan dan Saliran Negeri, MADA, KADA, IADA-IADA dan ahli Jawatankuasa PPP Peringkat Negeri dan Kebangsaan di atas sumbangan dan kerjasama mereka untuk membekalkan maklumat yang diperlukan serta penandatanganan laporan ini.

Jabatan Pertanian mengalu-alukan komen dan cadangan ke atas data yang dibentangkan untuk memperbaiki keluaran penerbitan ini yang akan datang.

DATO' ZAHIMI BIN HASSAN

Ketua Pengarah Pertanian Jabatan
Pertanian Semenanjung Malaysia.

PREFACE

This publication on Paddy Production Survey (PPS), Main Season 2020/2021 is one of the several publications produced by the Department of Agriculture which provides comprehensive information on paddy. This issue is the 82th in the series of PPS publications. The information refers to PPS for the period of paddy planting between 1st August 2010 to 28th February 2021 which covers the Yield Survey and the Paddy Cultivation Activity Area Survey.

This report provides information on the scope and methodology of the survey and results of the PPS for Wetland Paddy and Dry land Paddy at the state and national levels. Besides this, information on farm practices and results of diriage tests are also presented.

I hope this publication will fulfill the needs of planners, policy makers, researchers and also the public sector.

I would like to thank the Secretariat of the PPS, the Planning, Information Technology & Communications Division, the Paddy, Industrial Crops and Floriculture Division, the Soil Resource Management and Conservation Division, Plant Biosecurity Division, Agriculture Extension and Agro Based Industry Division, Agricultural Engineering Division, Crop Quality Control Division of the Department of Agriculture, all State Agriculture Departments, all State Drainage and Irrigation Departments, MADA, KADA, IADAs and members of the State and National Committees on PPS for their contributions and co-operations in the data collection and endorsement of this report.

The Department of Agriculture welcomes any comments and suggestions on the data presented for the improvement of future issues of this publication.

DATO' ZAHIMI BIN HASSAN

Director General of Agriculture

Department of Agriculture

Peninsular Malaysia.

The background of the slide is a photograph of a rice field with green stalks and yellowing grain heads. A large, dark green diagonal shape covers the left and top portions of the image. The title text is positioned within the white area on the right side of this green shape.

OBJEKTIF, LIPUTAN, SKOP DAN METODOLOGI

OBJEKTIF, LIPUTAN, SKOP DAN METODOLOGI

1. OBJEKTIF

Objektif utama Penyiasatan Pengeluaran Padi (PPP) ialah untuk mengutip data padi dengan menggunakan kaedah-kaedah pensampelan kebarangkalian dan ukuran-ukuran objektif bagi mendapatkan anggaran hasil, keluasan bertanam dan pengeluaran padi untuk setiap musim. Anggaran ini dikeluarkan di peringkat daerah, negeri dan juga kawasan jelapang padi. Objektif lain penyiasatan ini adalah untuk mengumpul maklumat tambahan tentang amalan kultura berkaitan tanaman padi.

2. LIPUTAN PENYIASATAN

PPP dilaksanakan untuk seluruh negara. Pengukuran secara objektif yang digunakan untuk Penyiasatan Hasil di Semenanjung Malaysia, Sabah dan Sarawak adalah meliputi Padi Sawah sahaja. Penyiasatan ini dijalankan untuk padi Musim Utama dan Luar Musim bagi Semenanjung Malaysia manakala bagi Sabah dan Sarawak, penyiasatan ini dijalankan untuk padi Musim Utama sahaja. Lain-lain maklumat yang tidak diperoleh dari pengukuran objektif ini seperti data Padi Huma, data keluasan dan hasil diperoleh terus daripada Jabatan Pertanian Negeri yang berkenaan.

3. SKOP LAPORAN

3.1 Laporan ini diterbitkan mengikut **musim** dengan menggunakan tempoh tanaman padi sebagai rujukan. Laporan **Musim Utama** meliputi padi yang ditanam dalam tempoh antara 1hb Ogos bagi sesuatu tahun hingga 28hb / 29hb Februari tahun berikutnya dan Laporan **Luar Musim** meliputi tempoh tanaman padi antara 1hb Mac hingga 31hb Julai bagi sesuatu tahun.

Laporan ini merangkumi Padi Sawah dan Padi Huma dan meliputi negeri-negeri di Semenanjung Malaysia, Sabah dan Sarawak.

3.2 Keputusan yang dibentangkan dalam laporan ini adalah seperti berikut:-

- a) Kadar sambutan penyiasatan
- b) Penyiasatan Hasil
- c) Penyiasatan Keluasan Aktiviti Tanaman Padi
- d) Kadar penggunaan baja
- e) Varieti padi yang ditanam

- f) Cara menanam padi
- g) Ujian pengeringan

3.3 Laporan ini adalah berdasarkan kepada jadual-jadual yang disediakan. Analisis PPP dibuat mengikut beberapa peringkat seperti berikut:-

- a) Malaysia
- b) Semenanjung Malaysia
- c) Kawasan jelapang padi
- d) Negeri
- e) Daerah terpilih

Walaupun bagaimanapun, tidak semua data dibuat analisis mengikut aspek-aspek di atas kerana ia bergantung kepada kesesuaian jadual-jadual yang diterbitkan.

4. METODOLOGI

4.1 Kaedah Penyiasatan

Terdapat dua soal selidik yang berasingan digunakan dalam PPP, iaitu, soal selidik untuk Penyiasatan Keluasan Aktiviti Tanaman Padi dan soal selidik untuk Penyiasatan Hasil.

4.1.1 Mulai Musim Utama 1997/1998, Penyiasatan Keluasan mengalami perubahan dari segi kaedah pungutan data dan kandungan soal selidik. Penyiasatan Keluasan kini telah dinamakan Penyiasatan Keluasan Aktiviti Tanaman Padi dan dilaksanakan secara bancian bulanan di Semenanjung Malaysia. Untuk mendapatkan data, pegawai luar buat lawatan ke ladang dan menganggarkan keluasan tanaman padi mengikut aktiviti berpandukan blok- blok padi yang diwujudkan. Setiap blok padi dikenali sebagai Unit Keluasan Tiruan (UKT). Ia merangkumi lot-lot padi yang bersebelahan dalam sesuatu kawasan tertentu yang ditandakan di atas syit-syit kadestra dalam strata tersebut. Di antara data yang dikutip adalah anggaran keluasan bertanam, tuaian, serangan terlibat dan musnah dan keluasan bertanam mengikut varieti padi.

4.1.2 Bagi Sabah dan Sarawak, data Penyiasatan Keluasan Aktiviti Tanaman Padi diperolehi terus daripada Jabatan Pertanian Negeri masing-masing.

4.1.3 Dalam Penyiasatan Hasil, data hasil boleh diperoleh mengikut kaedah- kaedah seperti berikut:-

a) Kaedah Petak Ujian

Data hasil padi boleh diperoleh dengan mengukur berat padi yang dituai dari petak ujian yang berukuran seluas 5m x 4m dalam sebuah petak sawah padi yang dipilih secara rambang.

b) Kaedah Guni

Data hasil padi boleh diperoleh dengan mendarabkan jumlah bilangan guni padi dari setiap sampel lot dengan purata berat padi seguni dan dibahagi dengan keluasan petak sawah yang dituai.

c) Kaedah Pukal

Data hasil padi boleh diperoleh dari berat kasar padi dari resit bagi setiap sampel lot atau lot-lot yang terpilih dan dibahagi dengan keluasan petak sawah yang dituai.

4.1.4 Lain-lain maklumat sampingan yang dikutip adalah termasuk amalan-amalan berkaitan dengan penanaman padi, iaitu, taraf mekanisasi, varieti padi yang ditanam dan sebab-sebab kerosakan padi. Data tersebut dikutip secara subjektif dan digunakan terutama untuk tujuan suntingan dan semakan, khususnya apabila terdapat hasil-hasil yang dilaporkan terlalu rendah atau terlalu tinggi.

4.1.5 Kerja luar untuk penyiasatan ini dijalankan oleh berbagai agensi termasuk Jabatan Pertanian Negeri, Jabatan Pengairan dan Saliran (JPS) Negeri, MADA, KADA dan IADA.

4.2 Rekabentuk Sampel

Rekabentuk sampel berperingkat berstrata telah digunakan dalam PPP. **Unit pensampelan tahap pertama** dikenali sebagai Unit Tanaman Tiruan (UTT) dalam Penyiasatan Hasil dan Unit Keluasan Tiruan (UKT) dalam Penyiasatan Keluasan Aktiviti Tanaman Padi. Setiap UTT atau UKT adalah terdiri daripada keluasan yang merangkumi lot-lot yang bersebelahan yang ditandakan di atas syit-syit kadestra dalam strata berkenaan. Unit pensampelan **tahap kedua** adalah lot-lot padi dalam

UTT atau UKT terpilih. Unit_pensampelan **tahap ketiga** adalah petak-petak sawah yang terpilih dalam lot tersebut dan akhir sekali **tahap keempat** adalah satu petak ujian yang berukuran seluas 5m x 4m. Bagi kaedah guni dan pukal, hanya unit pensampelan tahap kedua diperlukan, iaitu, di peringkat lot.

Dalam pelaksanaan Penyiasatan Keluasan Aktiviti Tanaman Padi, semua peringkat unit pensampelan tahap pertama atau UKT dilawati.

Kawasan bertanam padi di Semenanjung Malaysia dikategorikan kepada dua strata utama, iaitu:-

Strata A : Kawasan-kawasan pengairan

Strata B : Kawasan-kawasan bukan pengairan

Strata A: Mengandungi unit pensampelan tahap pertama, iaitu, skim-skim pengairan kecil JPS dan lapan skim pengairan utama atau kawasan jelapang padi. Strata A dipecahkan lagi kepada tiga strata kecil berdasarkan keluasan pabel padi bagi setiap unit pensampelan tahap pertama, iaitu:-

- a) 0.4 - 201 ha
- b) 202 - 4,046 ha
- c) 4,047 ha dan lebih

Strata B: Unit pensampelan tahap pertama adalah terdiri daripada mukim yang menjadi unit pentadbiran dalam sesebuah daerah. Strata ini dipecahkan lagi kepada empat strata kecil berdasarkan keluasan pabel padi di mukim tersebut, iaitu:-

- a) 0.4 - 39 ha
- b) 40 - 201 ha
- c) 202 - 404 ha
- c) 405 ha dan lebih

Dalam Penyiasatan Hasil, peruntukan untuk unit sampel tahap pertama adalah mengikut nisbah keluasan pabel padi dalam setiap strata kecil dan tahap kedua adalah sampel yang dipilih, iaitu, lot padi yang berasaskan kaedah pilihan *Circular Systematic*.

4.3 Rangka Pensampelan

Rangka pensampelan yang juga rangka lot padi mengandungi senarai induk lot-lot

padi. Senarai induk yang diwujudkan mengandungi maklumat-maklumat berikut:-

- a) Nombor Lot
- b) Lokasi seperti Nombor Syit Kadastro, Mukim, Daerah dan Negeri
- c) Kawasan lot terdiri daripada:-
 - i) Kawasan pabel padi
 - ii) Kawasan bukan pabel padi
 - iii) Kawasan pabel padi terbiar

4.4 Ralat Pensampelan

Oleh kerana Penyiasatan Hasil adalah satu penyiasatan berbentuk sampel, data yang dipersembahkan dalam laporan ini tertakluk kepada ralat pensampelan dan ralat bukan pensampelan.

Ralat bukan pensampelan merujuk kepada ralat yang terdapat dalam liputan, penggunaan konsep dan definisi, kesilapan mengukur, kesilapan pengiraan, dsb. Kesilapan ini dapat dikawal melalui latihan, pengawasan kerja luar dan penyuntingan soal selidik.

Ralat pensampelan dalam laporan ini dipersembahkan sebagai peratus Ralat Piawai Relatif (% R.P.R). Ralat Piawai ialah satu ukuran yang diperolehi daripada varian pensampelan yang menunjukkan sejauh mana sesuatu anggaran itu hampir kepada nilai yang dijangkakan (misalnya kadar hasil padi). Maka, Ralat Piawai mengukur **ketepatan** sesuatu anggaran dan bukan ketelitiannya yang menunjukkan sejauh mana hampirnya nilai anggaran kepada nilai yang sebenar. Nilai sebenar tidak diketahui kerana ianya hanya boleh diperolehi sekiranya banci dijalankan tanpa sebarang ralat bukan pensampelan yang disebutkan di atas. Perkara ini hendaklah diambil perhatian apabila menggunakan Ralat Piawai untuk mengulas keputusan- keputusan penyiasatan ini.

4.5 Kaedah Anggaran Hasil dan Keluasan

4.5.1 Purata hasil padi diperolehi berasaskan kawasan bertanam. Padi dalam petak terpilih dalam sampel (lot padi atau petak ujian) dituai dan hasil yang diperolehi ditimbang (kg) dan direkodkan sewajarnya. Teknik **purata mudah** digunakan untuk mendapatkan purata hasil padi dari sampel-sampel dan seterusnya teknik **purata wajar** digunakan untuk mendapat anggaran purata hasil padi pada peringkat strata, daerah, negeri dan Malaysia. Terdapat tiga jenis purata hasil padi yang dilaporkan dalam laporan ini, iaitu:-

- a) **Purata hasil padi basah** (kg/ha) ialah purata hasil padi semasa menuai.
- b) **Purata hasil padi kering** (kg/ha) ialah purata hasil padi selepas pengeringan yang mana kandungan kelembapan wap basah sekitar 14%.
- c) **Purata hasil padi bersih** (kg/ha) ialah purata hasil padi selepas pengeringan, dibersihkan dan apabila kandungan kelembapan wap basah tepat pada 14%.

4.5.2 Sebagaimana yang telah dijelaskan di para 4.1.1 di atas, keluasan bertanam padi di skim-skim pengairan dan luar pengairan telah dianggarkan secara bancian ke atas semua UKT yang aktif bertanam. Seterusnya data tersebut dikumpul untuk mendapat anggaran keluasan di peringkat strata kecil dan daerah.

Akhir sekali, anggaran padi yang ditanam di skim-skim pengairan dan luar pengairan dikumpul untuk mendapat data di peringkat daerah, negeri, Semenanjung Malaysia dan Malaysia.

5. KONSEP DAN DEFINISI

5.1 Skim Pengairan

Skim pengairan merujuk kepada projek pengairan yang telah **siap** (*completed*), **dijaya gunakan** (*commissioned*), **beroperasi** dan diisytiharkan oleh pihak berkuasa sebagai kawasan pengairan. Kebanyakan skim-skim ini dikendalikan oleh organisasi formal kerajaan seperti Jabatan Pengairan dan Saliran (JPS), MADA dan KADA. Hampir semua skim mempunyai sempadan yang diwartakan. Biasanya sempadan ini adalah sama dengan sempadan yang ditetapkan semasa projek tersebut pertama kali ditentukan. Terdapat beberapa skim pengairan yang diwartakan sebagai kawasan pengairan berdasarkan Akta Ordinan Pengairan 1953 (Pindaan 1989).

5.2 Luar Pengairan

Luar pengairan merujuk kepada kawasan yang bertanam padi tanpa sistem pengairan. Penanaman padi di kawasan ini pada lazimnya bergantung kepada air hujan.

5.3 Nama Skim

Ia merujuk kepada nama rasmi skim pengairan dan nama ini digunakan dalam semua urusan pentadbiran.

5.4 Kawasan Jelapang Padi

Kawasan jelapang padi merujuk kepada skim pengairan yang besar (lebih daripada 4,000 hektar) dan diiktiraf oleh kerajaan dalam Dasar Pertanian Negara sebagai kawasan utama pengeluaran padi. Terdapat dua belas kawasan jelapang padi di Malaysia, iaitu, MADA, KADA, IADA Kerian, IADA BLS, IADA P. Pinang, IADA Seberang Perak, IADA KETARA, IADA Kemasin Semerak, IADA Pekan dan IADA Rompin, IADA Batang Lupar dan IADA Kota Belud.

5.5 Luar kawasan Jelapang Padi

Luar kawasan jelapang padi merujuk kepada kawasan-kawasan di skim-skim pengairan kecil dan kawasan-kawasan luar skim-skim pengairan.

5.6 Pasel Padi

Pasel padi adalah sekeping tanah yang pada kebiasaannya digunakan untuk penanaman padi. Pasel padi boleh dikelaskan sebagai berikut:-

- (a) Pasel Padi Aktif
- (b) Pasel Padi Pelbagai
- (c) Pasel Padi Terbiar

5.7 Pasel Padi Aktif

Ia merujuk kepada pasel padi yang lazimnya bertanam padi sekurang-kurangnya sekali dalam tempoh 3 tahun atau dalam 5 musim yang lepas.

5.8 Pasel Padi Pelbagai

Ia merujuk kepada pasel padi yang ditanam dengan tanaman kontan atau tanaman sementara seperti sayur-sayuran, jagung, pisang, tebu dan sebagainya.

5.9 Pasel Padi Terbiar

Pasel padi terbiar adalah pasel padi yang tiada aktiviti padi atau tanaman sementara lain (tidak diusahakan) selama 3 tahun yang lepas atau 5 musim atau lebih.

5.10 Lot

Lot adalah sekeping tanah yang telah diberi nombor, keluasan dan sempadan yang tertentu seperti yang ditetapkan oleh Jabatan Ukur dan Pemetaan. Butir-butir lot ini dicatatkan di syit kadestra atau dalam buku pendaftaran mukim atau *Key Plan* JPS.

5.11 Lot Padi

Lot padi adalah sekeping tanah dimana sebahagian atau keseluruhan pasesnya digunakan untuk penanaman padi, samada sekali atau lebih dalam setahun tanpa mengambil kira syarat yang dinyatakan dalam geran tanah. Bagi setiap lot padi kemungkinan terdapat dua atau lebih tanaman dalam pases yang ditanam. Oleh demikian, penentuan sesuatu lot padi tidak bergantung kepada syarat tanah yang dinyatakan tetapi kepada **kegunaan sebenar tanah tersebut**.

5.12 Tanah Tol

Tanah tol adalah sekeping tanah yang mempunyai sempadan yang tertentu. Sempadan ini adalah berdasarkan kepada pemilikan pengusaha atau penghuni secara sementara serta berkemungkinan membayar lesen tahunan. Biasanya tanah tol tidak mempunyai nombor lot atau keluasan di atas syit kadestra. Pengenalannya adalah berdasarkan kepada nombor surat hakmilik sementara dan nama pengusaha yang diperoleh daripada pejabat tanah.

5.13 Tanah Tol Padi

Tanah tol padi adalah sekeping tanah dimana sebahagian atau keseluruhan pasesnya digunakan untuk penanaman padi samada ditanam sekali atau lebih dalam setahun.

5.14 Keluasan Kasar Skim

Keluasan kasar skim adalah termasuk bendang, jalan ladang, taliair, parit, struktur-struktur, kampung, dusun dan sebagainya.

5.15 Keluasan Bersih Skim

Keluasan bersih skim adalah keluasan keseluruhan pases padi dalam skim, iaitu, keluasan kasar ditolak keluasan untuk jalan, taliair, parit, struktur, kampung, dusun dan sebagainya.

5.16 Musim Padi

Musim padi merujuk kepada aktiviti-aktiviti penanaman padi daripada penyediaan tanah sehingga penuaian.

5.17 Musim Utama

Musim utama adalah tempoh yang mana penanaman padi adalah yang paling sesuai berdasarkan iklim tempatan (musim hujan) dan tidak bergantung sepenuhnya kepada sistem pengairan. Untuk tujuan pentadbiran, Musim Utama ditakrifkan sebagai tempoh **bila padi ditanam** yang mana tarikh mula **ditanam*** jatuh antara **1hb Ogos hingga 28hb / 29hb Februari tahun berikutnya**.

5.18 Luar Musim

Luar musim adalah tempoh kering yang mana penanaman padi biasanya bergantung kepada sistem pengairan. Untuk tujuan pentadbiran, Luar Musim ditakrifkan sebagai tempoh **bila padi ditanam** yang mana tarikh mula **ditanam*** jatuh antara **1hb Mac hingga 31hb Julai dalam tahun berkenaan**.

5.19 Data Tahunan

Data tahunan padi merujuk kepada data yang dilaporkan untuk kedua-dua musim, iaitu, Musim Utama dan Luar Musim. Contohnya, data untuk tahun 2021 merujuk kepada Musim Utama 2020/2021 dan Luar Musim 2021. Konsep ini digunakan untuk purata hasil padi, keluasan bertanam dan anggaran pengeluaran padi.

* Definisi ditanam ialah menabur bagi sistem tabur terus dan mencedung bagi sistem semaian.

***OBJECTIVES,
COVERAGE, SCOPE
AND METHODOLOGY***

OBJECTIVES, COVERAGE, SCOPE AND METHODOLOGY

1. OBJECTIVES

The primary objective of the Paddy Production Survey (PPS) is to collect paddy statistics using probability sampling methods and objective measurements to obtain estimates of yield, planted area and production for each season. These estimates are produced at the district, state and granary area levels. Another objective of the survey is to collect supplementary information on farm practices related to paddy cultivation.

2. COVERAGE OF THE SURVEY

PPS is carried out covering the whole nation. An objective measurement is used for the Yield Survey in Peninsular Malaysia, Sabah and Sarawak and is confined to Wetland Paddy only. The survey is conducted for paddy in the Main Season and the Off Season for Peninsular Malaysia while for Sabah and Sarawak, the survey is conducted for paddy in the Main Season only. Other information which are not obtained by the objective measurements such as data on Dryland Paddy, area and yield data are obtained directly from the Department of Agriculture of the states concerned.

3. SCOPE OF THE REPORT

- 3.1** *This report is published by **seasons** using the paddy planting period as reference. Report for the **Main Season** covers period for paddy planted between 1st August of a particular year to 28th / 29th February of the following year and Report for the **Off Season** covers period for paddy planted between 1st March to 31st July in a year.*

This report is confined to Wetland Paddy and Dryland Paddy and covers all states in Peninsular Malaysia, Sabah and Sarawak.

- 3.2** *The results presented in this report are as follows:-*

- a) Survey response rate*
- b) Yield Survey*
- c) Paddy Cultivation Activity Area Survey*
- d) Rate of fertilizer used*

- e) *Paddy varieties planted*
- f) *Paddy planting methods*
- g) *Driage test*

3.3 *This report is based on the tables presented and analyses of the PPS are made at various levels, namely:-*

- a) *Malaysia*
- b) *Peninsular Malaysia*
- c) *Granary areas*
- d) *States*
- e) *Selected districts*

However, not all data are analysed based on the above aspects as they depend on the suitability of the tables published.

4. METHODOLOGY

4.1 Survey Method

There are two different types of questionnaires used in the PPS, namely questionnaire for the Paddy Cultivation Activity Area Survey and questionnaire for the Yield Survey.

4.1.1 From the Main Season 1997/1998, changes were made in the Area Survey particularly in the method of data collection and contents of the questionnaire. The Area Survey is now named as Paddy Cultivation Activity Area Survey and is carried out as a monthly census in Peninsular Malaysia. To collect these data, field officers made field visits to the paddy fields and estimate the hectareage of paddy for each activity based on the paddy blocks created. Each paddy block is known as an Artificial Area Unit (AAU) which is made up of contiguous paddy lots in a defined area and marked on cadastral sheets within the strata. Among the data collected are estimates on area planted, harvested, affected and destroyed and area planted according to paddy varieties.

4.1.2 For Sabah and Sarawak, data on Paddy Cultivation Activity Area Survey are obtained directly from the respective State Department of Agriculture.

4.1.3 For the Yield Survey, the yield data can be obtained by the following methods:-

a) Paddy Plot Method

The yield data for paddy can be obtained by measuring the weight of the paddy harvested from the paddy plot measured with an area of 5m x 4m in the selected paddy field determined at random.

b) Gunny Method

The yield data for paddy can be obtained by multiplying the total number of gunnies of paddy from the sample lot with the average weight of paddy per gunny and divide by the harvested paddy area.

c) Bulk Handling Method

The yield data for paddy can be obtained from the gross weight of paddy shown in the receipt for the selected sample lot or lots involved and divide by the harvested paddy area.

4.1.4 Supplementary information collected includes farm practices related to paddy cultivation namely mechanisation status, paddy varieties planted and causes of damage of paddy. The above data are collected on a subjective basis and are used primarily for editing and verification purposes especially when very low or high yields are reported.

4.1.5 Field work in this survey is carried out by various agencies including the State Departments of Agriculture, State Departments of Drainage and Irrigation (DID), MADA, KADA, and IADA.

4.2 Sample Design

For PPS, a stratified multi-stage sample design is used. The **primary sampling unit** is termed as an Artificial Cropping Unit (ACU) in the Yield Survey and an Artificial Area Unit (AAU) in the Paddy Cultivation Activity Area Survey. Each ACU or AAU is made up of an area defined by a number of contiguous lots and is marked on cadastral sheets within the strata. The **second stage** sampling units are the paddy

lots within the selected ACU or AAU. The **third stage** sampling units are the paddy fields selected within the lot and lastly, the **fourth stage** is the paddy plot measured with an area of 5m x 4m. For the gunny and the bulk handling methods, only the second stage sampling unit is needed, that is, at the lot basis.

During the implementation of the Paddy Cultivation Activity Area Survey, all levels of primary sampling units or AAUs were visited. Planted paddy areas in Peninsular Malaysia are categorised into two major strata, that is,

Stratum A: Irrigated Areas

Stratum B: Non-irrigated Areas

Stratum A: Comprises primary sampling unit, that is, DID minor irrigation schemes and eight major irrigation schemes also known as granary areas. Stratum A is again stratified into three smaller strata which are based on paddy parcel area for each primary sampling unit, that is:-

- a) 0.4 - 201 ha
- b) 202 - 4,046 ha
- c) 4,047 ha and above

Stratum B: The primary sampling unit comprises a mukim which is the administrative unit in a district. This stratum is again stratified into four smaller strata which are based on paddy parcel area in the mukim, that is:-

- a) 0.4 - 39 ha
- b) 40 - 201 ha
- c) 202 - 404 ha
- d) 405 ha and above

In the Yield Survey, the allocation for the primary sampling units is based on the ratio of paddy parcel area in each smaller stratum and the second stage is the sample selected which is the paddy lot based on the Circular Systematic selection method.

4.3 Sampling Frame

The sampling frame which is also the frame of paddy lots contains the master list of paddy lots. The master list developed contains the following information:-

- a) Lot number
- b) Location such as Cadastral Sheet Number, Mukim, District and State

- c) Lot area consists of:-
 - i) Paddy parcel area
 - ii) Non-paddy parcel area
 - iii) Idle paddy parcel area

4.4 Sampling Errors

Since the Yield Survey is a sample survey, the figures presented in the report are subject to both sampling and non-sampling errors.

Non-sampling errors refer to errors in coverage, application of concepts and definitions, measurement errors, computational errors, etc. These errors can be controlled to a large extent by training, supervision on field work and editing of questionnaires.

Sampling errors in this report are presented in terms of percentage Relative Standard Error (% R.S.E). The Standard Error is a measure derived from the sampling variance which shows the extent to which an estimate is near to its expected value (e.g. yield rate of paddy). Thus, Standard Error is said to measure the **precision** of an estimate and not its accuracy which refers to the closeness of the estimate to its true value. The true value is unknown since it can only be obtained if a census is conducted without any non-sampling errors mentioned above. This has to be borne in mind when using Standard Error to interpret the results of the survey.

4.5 Methods of Estimating Yield and Area

4.5.1 The average yield of paddy is derived based on planted area. Paddy within a selected plot in the sample (paddy lot or paddy plot) is harvested and the yield is measured, weighed (kg) and recorded accordingly. **Simple average** technique is used to calculate the average yield of paddy within the samples and subsequently **weighted average** technique is used to produce estimates of average yield of paddy at strata, districts, states and Malaysia levels. There are three types of average yields of paddy reported in this report, namely:-

- a) **Average yield of wet paddy** (kg/ha) is the average yield of paddy at harvest.
- b) **Average yield of dried paddy** (kg/ha) is the average yield of paddy after drying when the moisture content reaches about 14%.

- c) **Average yield of cleaned paddy** (kg/ha) is the average yield of paddy after drying, cleaning and when the moisture content is at exact 14%.

4.5.2 As explained in paragraph 4.1.1 above, the hectareage of paddy inside the irrigation and outside the irrigation schemes were estimated through the census on all active AAUs. Subsequently the data are compiled to obtain estimates for the small sized strata and districts.

Lastly, the estimates of paddy planted inside the irrigation and outside the irrigation schemes are compiled to obtain data for the districts, states, Peninsular Malaysia and Malaysia levels.

5. CONCEPTS AND DEFINITIONS

5.1 Irrigation Scheme

An irrigation scheme refers to an irrigation project which is **completed, commissioned, operated** and declared by the authority as an irrigation area. Most of these schemes are managed by formal government organisations such as Drainage and Irrigation Department (DID), MADA and KADA. Almost all schemes have gazetted boundaries. Very often this boundary is the same as the boundary stated when the project was first determined. There are a few irrigation schemes gazetted as irrigation areas based on the Irrigation Ordinance Act 1953 (Amended 1989).

5.2 Outside Irrigation

Outside irrigation refers to an area planted with paddy without any irrigation system. Mostly, paddy planting in the area depends on the supply of rain water (rainfed area).

5.3 Name of Scheme

This refers to the official name of an irrigation scheme and this name is used in all administrative matters.

5.4 Granary Area

Granary areas refer to major irrigation schemes (above 4,000 hectares) and are recognised by the government in the National Agriculture Policy as the main paddy producing areas. There are twelve granary areas in Malaysia, namely, MADA, KADA, IADA Kerian, IADA BLS, IADA P. Pinang, IADA Seberang Perak, IADA KETARA, IADA Kemasin Semerak, IADA Pekan, IADA Rompin, IADA Batang Lupar and IADA Kota Belud.

5.5 Outside Granary Area

Outside granary areas refer to areas in minor irrigation schemes and areas outside irrigation schemes.

5.6 Paddy Parcel

A paddy parcel is a piece of land which is usually used for planting paddy. Paddy parcel can be classified as follows:-

- (a) Active Paddy Parcel*
- (b) Miscellaneous Paddy Parcel*
- (c) Idle Paddy Parcel*

5.7 Active Paddy Parcel

This refers to paddy parcel which is normally planted with paddy at least once in the last 3 years or during the past 5 seasons.

5.8 Miscellaneous Paddy Parcel

This refers to paddy parcel which is planted with cash or temporary crops, e.g., vegetables, maize, banana, sugar cane etc.

5.9 Idle Paddy Parcel

An idle paddy parcel is one which has no paddy activities or other temporary crops (not operated on) for the past 3 years or 5 seasons or more.

5.10 Lot

A lot is a piece of land that has been given a number, measured area and boundaries as determined by the Surveyor and Mapping Department. Details of the lot are recorded in the cadastral sheet or in the mukim registration book or the Key Plan of DID.

5.11 Paddy Lot

*A paddy lot is a piece of land whereby a portion or the whole parcel is used for paddy planting irrespective whether it is planted once or more in a year without consideration of the conditions stated in the land grant. For each paddy lot there is a possibility of two crops or more in the planted parcel. Thus, the determination of paddy lot does not depend on the stated land conditions but instead on the **actual usage of land**.*

5.12 Toll Land

A toll land is a piece of land with a specified boundary. This boundary is based on the operator's ownership or occupants on a temporary basis and with a possibility of paying yearly license. Normally toll land does not have a lot number or measured area on the cadastral sheet. The identification is based on temporary ownership letter number and name of the operator which is obtained from the land office.

5.13 Paddy Toll Land

Paddy toll land is a piece of land where a portion or a whole parcel is used for paddy planting whether it is planted once or more in a year.

5.14 Gross Area of Scheme

The gross area of a scheme includes paddy fields, farm roads, irrigations, drainage, structures, villages, orchards etc.

5.15 Net Area of Scheme

This is the overall paddy parcel area in the scheme, i.e., the gross area minus the

area for roads, irrigations, drainage, structures, villages, orchards etc.

5.16 Paddy Season

Paddy season refers to the activities of paddy planting from the preparation of land to harvesting.

5.17 Main Season

*Main season is a period whereby paddy planting is very suitable based on local climate (rainy season) and does not depend totally on irrigation system. For administrative purposes, Main Season is defined as the period **when paddy is planted** in which the commence date of **planting*** falls between **1st August to 28th / 29th February of the following year.***

5.18 Off Season

*Off Season is a dry period and paddy planting normally depends on an irrigation system. For administrative purposes, Off Season is defined as the period **when paddy is planted** in which the commence date of **planting*** falls between **1st March to 31st July of the year.***

5.19 Yearly Data

Yearly data for paddy refers to data reported in both seasons, i.e., the Main Season and the Off Season. For example, data for 2021 refers to the Main Season 2020/2021 and the Off Season 2021. This concept applies to average yield of paddy, area planted and estimate of paddy production.

** Definition of planting is sowing for direct seeding system and transplanting for nursery system.*

Catatan:
Notes:

a Penurunan keluasan pabel padi disebabkan persempadanan semula kawasan padi.
Lower paddy parcel area due to changes in boundaries of paddy parcels.

b Persempadanan semula kawasan padi.
Changes in boundaries of paddy parcels.

c Semakan semula keluasan pabel padi.
Revision of paddy parcel area.
